

smartEIT

SLS Mission Statement: Leverage RFID Technology to Present Actionable Data to Highly Engaged End Users

Web Client

Intuitive, easy to navigate screens allow you to easily locate and track items.

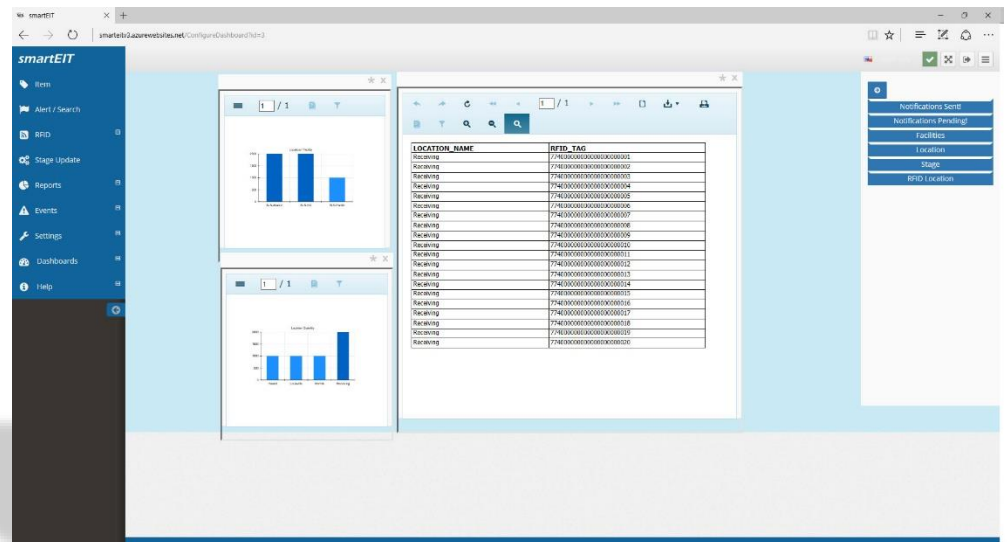

Change Management: Having a record of what was changed, in addition to when it was changed and who changed it.

Dashboards and Reporting: Monitor your environment with real-time dashboards. Build stunning reports in seconds with ready-to-use report templates. Get real-time visibility across your supply chain.

Real-time Information from the edge using Cloud connected web services.

Built-in Reports that include:

current item location, item movement, and transaction histories.

Mobile Client

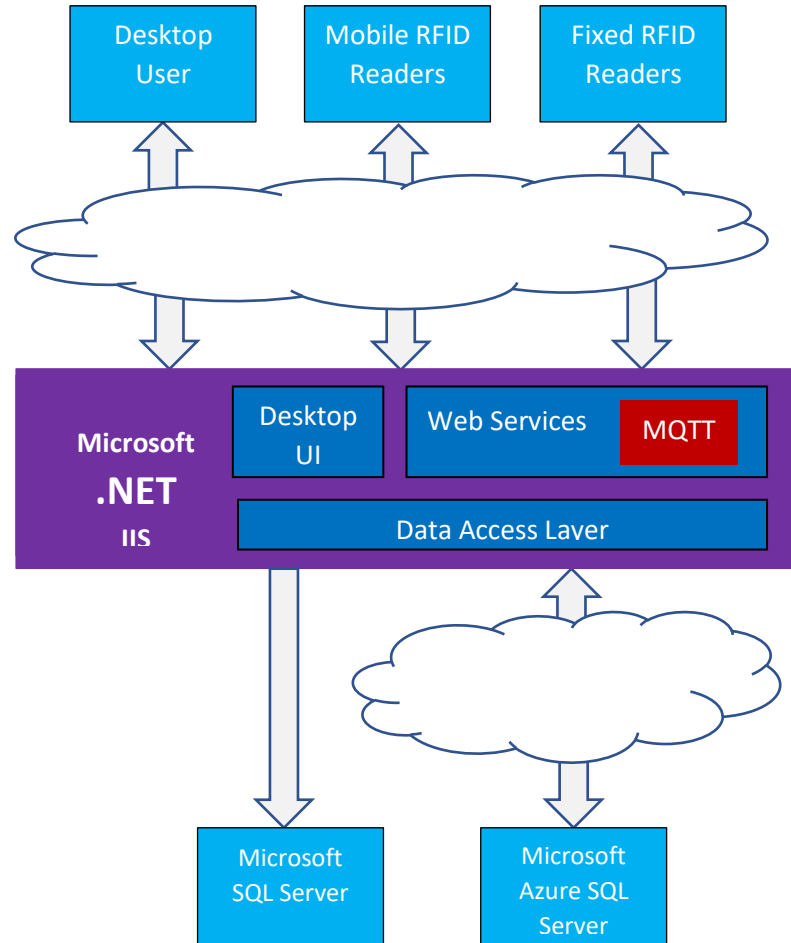

- Link the EPC to existing Item Number
- Life Cycle Management
- Updated by Item or EPC
- Visibility to Missing Items
- Mobile Tag Locate
- Write to Tags
- Confirm Location Accuracy
- iOS and Android Compatibility

Why smartEIT ?

smartEIT offers real time visibility of your enterprise items. Whether the task at hand is to follow returnable containers, IV pumps, IT assets or apparel items through their life cycle consider passive UHF RFID technology and **smartEIT** to achieve these goals. The software leverages cloud connected web services and controls data collection at the edge using mobile and/or fixed RFID enabled business processes. **smartEIT** allows you to automate transactions such as receiving, location movements, invoicing, cycle counting and inventory replenishment. **smartEIT** provides methods to organize and contextualize all discussions and decisions, providing transparency across the organization and driving efficiency at scale. The decision-maker knows where action is needed and has the ability to provide real-time review and approval.

Supply Chain Improvements

Improved quality and transparency of data across the supply chain. Accurate data that is easily processed makes it possible to solve multiple process inefficiencies, increase the accuracy and reduce the time spent taking inventory.

Work in Process

smartEIT and RFID help to enable flexible manufacturing, track the work process and aid in maintaining regulatory compliance. **smartEIT** helps to collect build, process and lot data for making business decisions based on actual data as opposed to "best guess".

Eliminate Waste

smartEIT connects teams and data, eliminating those data stores and enabling those throughout the entire product lifecycle to stay aligned as they go. This cuts down on costly rework and defects, while helping to ensure that you're delivering what everyone in the business expects, on-time and on-budget.
